Our treatments are designed to eliminate acute or chronic pain as fast as possible without drugs or surgery. We do this utilizing lifestyle changes, modern chiropractic care, physical therapy modalities, acupuncture without needles, exercise rehabilitation, nutritional therapies, blood, urine, saliva and stool analysis. Our goal is to develop a personalized program for my patients, to get them back to their favorite activities as quickly as possible, prevent future injuries, and maintain a peak level of fitness.

Our bodies are a combination of physical, chemical and mental (emotional & spiritual) components. Imbalance in one or more areas can affect the whole body and should be treated simultaneously for quicker and more complete results.

Westside Wellness Center was the first office in Los Angeles to offer a comprehensive treatment program for the treatment of Peripheral Neuropathy. Treating nerve damage successfully by treating neurologically and metabolically.

Dr. Kelberman's life's work is a chiropractic specialty known as "Applied Kinesiology". That term means, the study of the movement of our body. Our bodies are moved by muscles and Dr. Kelberman is a master in the diagnosis and treatment of sport related and injuries of all types. Tennis is Dr. Kelberman's favorite sport and Afghan Hound dogs are one of his passions. His first exposure to the wonderful world of chiropractic happened after he was struck by a car at the age of twelve. Chiropractic care was the only treatment that enabled restoration of function. As a result he continues to treat motor vehicle accidents to this date.
