

What Digital X-Ray System should I buy?

Jose Serrano, DACBR

Fugi, Konica, viztek or Carestream are good major brands among many others. I'd stay away from Naomi.

Jennifer Pedley, DACBR

That's a big question...I can certainly tell you what system to stay away from which is Naomi. The resolution is poor and radiologists are starting to refuse to read images from Naomi systems. The panel or board or plate is the most important, either cesium or gadox. Cesium is the best. Nothing else, nothing that's 'similar' to cesium or gadox. Not a fan of 20/20 systems, poor resolution. Fugi, Kodak, agfa, carestream, rayence units, I like. This is for CR and DR units. I know some chiros like west coast for xray purchase and installments in North CA.
